Dkt. 2271/71239

Listing of Claims

The following listing of claims will replace all prior versions, and listings, of claims in the subject application:

1. (original) A facsimile apparatus comprising:

a specific destination name storage section to store destination names of specific destination;;

a receiving end identifying section to identify a receiving end by analyzing terminal information received from the receiving end when making a facsimile transmission to the receiving end;

a specific destination identifying section to search from the specific destination name storage section a destination name corresponding to the receiving end which is identified by the receiving end identifying section; and

a notifying section to output a communication result notification indicative of a result of the facsimile transmission to the receiving end only when the specific destination identifying section finds the corresponding destination name in the specific destination name storage section.

2. (original) The facsimile apparatus as claimed in claim 1, wherein the notifying section outputs a communication result report for each facsimile transmission made to the receiving end having the corresponding destination name stored in the specific destination name storage section.

3. (original) The facsimile apparatus as claimed in claim 2, wherein the communication

Page 3

Dkt. 2271/71239

result report has contents and/or format set differently for each specific destination.

4. (original) The facsimile apparatus as claimed in claim 2, wherein the notifying section displays or prints the communication result report.

5. (original) The facsimile apparatus as claimed in claim 1, wherein the notifying section outputs a transmission end sound for each facsimile transmission made to the receiving end having the corresponding destination name stored in the specific destination name storage section.

6. (original) The facsimile apparatus as claimed in claim 5, wherein the transmission end sound is set differently for each specific destination.

7. (original) The facsimile apparatus as claimed in claim 1, wherein the notifying section prints a stamp mark on a scanned document for each facsimile transmission made to the receiving end having the corresponding destination name stored in the specific destination name storage section.

8. (original) The facsimile apparatus as claimed in claim 7, wherein the stamp mark is set differently for each specific destination.

9. (original) The facsimile apparatus as claimed in claim 1, wherein the notifying section makes the communication report notification by one or an arbitrary combination of

Nobuhiro ITOH, S.N. 10/685,098
Page 4

Dkt. 2271/71239

communication report notifications selected from a group consisting of outputting a communication result report, outputting a transmission end sound, and printing a stamp mark on a scanned document, for each facsimile transmission made to the receiving end having the corresponding destination name stored in the specific destination name storage section.

10. (original) The facsimile apparatus as claimed in claim 9, wherein the communication result report, the transmission end sound, and the stamp mark are set differently for each specific destination.

11. (original) A facsimile apparatus comprising:

specific destination name storage means for storing destination names of specific destination;;

receiving end identifying means for identifying a receiving end by analyzing terminal information received from the receiving end when making a facsimile transmission to the receiving end;

specific destination identifying means for searching from the specific destination name storage means a destination name corresponding to the receiving end which is identified by the receiving end identifying means; and

notifying means for outputting a communication result notification indicative of a result of the facsimile transmission to the receiving end only when the specific destination identifying means finds the corresponding destination name in the specific destination name storage means.

12. (original) The facsimile apparatus as claimed in claim 11, wherein the notifying

Page 5

Dkt. 2271/71239

means makes the communication report notification by one or an arbitrary combination of communication report notifications selected from a group consisting of outputting a communication result report, outputting a transmission end sound, and printing a stamp mark on a scanned document, for each facsimile transmission made to the receiving end having the corresponding destination name stored in the specific destination name storage means.

13. (original) The facsimile apparatus as claimed in claim 12, wherein the communication result report, the transmission end sound, and the stamp mark are set differently for each specific destination.

14. (original) A facsimile communication method comprising:

storing destination names of specific destinations in a storage section;

identifying a receiving end by analyzing terminal information received from the receiving end when making a facsimile transmission to the receiving end;

searching from the storage section a destination name corresponding to the receiving end which is identified; and

outputting a communication result notification indicative of a result of the facsimile transmission to the receiving end only when the corresponding destination name is found in the storage section.

15. (original) The facsimile communication method as claimed in claim 14, wherein the outputting outputs a communication result report for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

Page 6

Dkt. 2271/71239

16. (original) The facsimile communication method as claimed in claim 15, wherein the communication result report has contents and/or format set differently for each specific destination.

17. (original) The facsimile communication method as claimed in claim 15, wherein the outputting displays or prints the communication result report.

18. (original) The facsimile communication method as claimed in claim 14, wherein the outputting outputs a transmission end sound for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

19. (original) The facsimile communication method as claimed in claim 18, wherein the transmission end sound is set differently for each specific destination.

20. (original) The facsimile communication method as claimed in claim 14, wherein the outputting prints a stamp mark on a scanned document for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

21. (original) The facsimile communication method as claimed in claim 20, wherein the stamp mark is set differently for each specific destination.

22. (original) The facsimile communication method as claimed in claim 14, wherein the

Page 7

Dkt. 2271/71239

outputting makes the communication report notification by one or an arbitrary combination of communication report notifications selected from a group consisting of outputting a communication result report, outputting a transmission end sound, and printing a stamp mark on a scanned document, for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

23. (original) The facsimile communication method as claimed in claim 22, wherein the communication result report, the transmission end sound, and the stamp mark are set differently for each specific destination.

24. (currently amended) A computer-readable ~~storage medium which stores~~ medium tangibly embodying a program ~~of instructions~~ for causing a computer to carry out a facsimile ~~functions~~ communication method, said method comprising:

a specific destination name storage step storing ~~procedure causing the computer to store~~ destination names of specific destinations in a storage section;

a receiving end identifying step identifying ~~procedure causing the computer to identify~~ a receiving end by analyzing terminal information received from the receiving end when making a facsimile transmission to the receiving end;

a specific destination identifying step searching in ~~procedure causing the computer to search from~~ the storage section for a destination name corresponding to the receiving end which is identified ~~[[by]]~~ in the receiving end identifying ~~section~~ step; and

a notifying step outputting ~~procedure causing the computer to output~~ a communication result notification indicative of a result of the facsimile transmission to the receiving end only

Page 8

Dkt. 2271/71239

when ~~the specific destination identifying section finds~~ the corresponding destination name is found in the storage section, in the specific destination identifying step.

25. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 24, wherein the notifying step ~~procedure~~ causes the computer to output a communication result report for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

26. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 25, wherein the communication result report has contents and/or format set differently for each specific destination.

27. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 25, wherein the notifying step ~~procedure~~ causes the computer to display or print the communication result report.

28. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 24, wherein the notifying step ~~procedure~~ causes the computer to output a transmission end sound for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

29. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 28, wherein the transmission end sound is set differently for each specific destination.

Page 9

Dkt. 2271/71239

30. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 24, wherein the notifying step ~~procedure~~ causes the computer to print a stamp mark on a scanned document for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

31. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 30, wherein the stamp mark is set differently for each specific destination.

32. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 24, wherein the notifying step ~~procedure~~ causes the computer to make the communication report notification by one or an arbitrary combination of communication report notifications selected from a group consisting of outputting a communication result report, outputting a transmission end sound, and printing a stamp mark on a scanned document, for each facsimile transmission made to the receiving end having the corresponding destination name stored in the storage section.

33. (currently amended) The computer-readable ~~storage~~ medium as claimed in claim 32, wherein the communication result report, the transmission end sound, and the stamp mark are set differently for each specific destination.
